

Rough Drawing of Wire Wick Holder Twisting Jig
 NOT TO SCALE - all measurements approximate

Making a Wire Wick Holder without the Jig:

Use three separate wires. Floral wire from Walmart works well. Use three separate people at each corner of the triangle. Each person inserts a rod into one twisted end of the triangle. Each person twists in turn as per the jig instructions until the twists reach the center. Then insert a brass tube in the hole and continued twisting will trap the tube. Finishing is the same as for wickholder made with the jig.
